DeRosa,V. and Marchetti,G.
A HINDIII RFLP and a gene lesion in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The mutation at position 1042 results in a change of Glu to and the one at position 1043 in a change from Glu to Gly. T mutation at position 1042 produces a premature stop codon.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (sites)

to treat hemophilia, comprises at least a operably linked to control sequence -
                               portion of Factor VIII
```

9; Fig 6; 92pp; English.

The present DNA sequence is a recombinant adenovirus-associated vector, CC (rAAV) construct pVm4.1cP8deltaB. This expression vector comprises the CC promoter, first intron (-573 to +985) of human elongation factor-lalpha CC (EFlalpha) gene, human Factor VIII coding sequence (hGWIII) and a CC polyadenylation signal from human growth hormone (hGH). This sequence is CC inserted between the AAV inverted terminal repeat (ITR) regions. The CC inserted between the AAV inverted terminal repeat (ITR) regions. The CC inserted between the AAV inverted terminal repeat (ITR) regions. The CC inserted between the AAV inverted terminal peptide, Al and A2 domains CC and 5 maino acids from the N-terminus of the B domain. The light chain CC segment comprises the C-terminal 85 amino acids of B domain and the A3, CC and C2 domains. Both the heavy and light chain segments are cloned CC into the same plasmid seperated by 42 nucleotides coding for 14 residues CC of the B domain, that is deleted. This plasmid is operably linked to CC control sequences, that directs the transcription and translation of the CF factor VIII gene. The adeno-associated viral vectors are used for gene CC therapy, because of factor VIII in vivo. The rAAV are used for gene CC therapy, because of their broad host range, safety profile and duration expression in the infected hosts.

coagulation Treating blood clotting disorder, especially hemophilia in mammals, by administering recombinant adeno-associated vectors which express blood factor VIII

Fig 6; 90pp; English

second recombinant adeno-associated virion comprising a nucleotide sequence encoding the heavy chain of factor VIII. The rAAV vector i useful in gene therapy for treating haemophilia A in mammals, in suffering from a blood clotting disorder. The method comprises administering a recombinant adeno-associated virion (rAAV) comprising a nucleotide sequence encoding the light chain of factor VIII and a The present invention relates to a method for treating a subject

The rAAV vector provides high level and long term expression of biologically active clotting factor VIII in vivo. The present sequence is pVM4.1cF8-B vector without the plasmid backbone. It comprises, human elongation factor 1 (EF1) promoter, B.-domain deleted human factor VIII coding sequence, a poly A signal and AAV inverted terminal repeats (ITRs) at the ends. The vector encodes both the light and heavy chains of human factor VIII separated by 14 amino acids of the B domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 4999 BP; 1375 A; 1151 C; 1155 G; 1318 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ωy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Дb
밁
                      The present DNA sequence is a recombinant adenovirus-associated vector, (rAAV) construct, pAAV-F8-1. This expression vector comprises the HNF-3 CC (arbumin promoter, the first intron (-573 to +985) of human elongation CC factor-lalpha (EFIalpha) gene, human Factor VIII coding sequence (hFVIII) CC and polyadenylation signal from human growth hormone (hGH). This sequence is inserted between the AAV inverted terminal repeat (ITR) regions. The CC first 57 bp encoding the 19 amino acid signal peptide, A1 and A2 domains CC and 5 amino acids from the N-terminals of the B domain. The light chain segment comprises the C-terminal 85 amino acids of B domain and the A3. CC control sequences, that directs the transcription and translation of the B domain, that is deleted. This plasmid is operably linked to CC control sequences, that directs the transcription and translation of the Factor VIII gene. The adeno-associated viral vectors are used for gene therapy, because of their broad host range, safety profile and duration of conference of their broad hosts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            20-OCT-1998;

                                                                                                                                                                                                                                                                  second recombinant adeno-associated virion comprising a nucleotide sequence encoding the heavy chain of factor VIII. The rAAV vector is useful in gene therapy for treating haemophilia A in mammals, in particular humans. The rAAV vector provides high level and long term expression of biologically active clotting factor VIII in vivo. The present sequence is pAAV-F8-1 vector without the plasmid backbone. It comprises HHF-3 mouse albumin promoter, a synthetic intron based on human elongation factor lalpha (EFIalpha) and immunoglobulin G (19G) intron sequences, B-domain deleted human factor VIII coding sequence, poly A signal based on rabbit beta-globin sequence and AAV inverted terminal repeats (ITRs) at the ends. The vector encodes both the light and heavy chains of human factor VIII.
                                                                                                                                                                                                                                 Sequence 11933 BP; 3258 A; 2818 C; 2717 G; 3140 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to a method for treating a subject suffering from a blood clotting disorder. The method comprises administering a recombinant adeno-associated virion (rAAV) comprising a nucleotide sequence encoding the light chain of factor VIII and a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Treating blood clotting disorder, especially hemophilia in mammals, administering recombinant adeno-associated vectors which express bloosgulation factor {\tt VIII}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 18; Fig 5; 90pp; English.
